

Prevention of Recurrent Symptomatic
Urinary Tract Infections in Patients with
Chronic Neurogenic Bladder Dysfunction:
The PReSUTINeB Study

Do you have persistent UTIs and have SCI with neurogenic bladder dysfunction?

If you do we're running a study and we'd love you to be involved.

Buckinghamshire Healthcare 
NHS Trust

How do you recognise and manage your symptoms and quality of life?

The study will strive to produce a consensus derived definition of UTI in patients with neurogenic bladder dysfunction. The results of the study will better inform doctors on how to treat UTIs in people living with a spinal cord injury.

It's easy to take part. You can either go online and fill in the questionnaire or the study can be carried out over the phone at a time convenient to you. By taking part you'll be helping us to better understand UTIs and inform future treatment of this debilitating complication.
